[57] ABSTRACT

PROBLEM TO BE SOLVED: To provide a rear package tray capable of reducing the number of components, the working manhour, and the manufacturing cost.

SOLUTION: An air cleaner 11 is composed of first and second sub-units 12a, 12b and a cover 13 for integrally covering the sub-units. The first sub-unit 12a is provided with an intake port 14 and an exhaust part 15 arranged along the longitudinal direction of a vehicle. The second sub-unit 12b is provided with an activating LED 22 for activating an photocatalyst filter 18 of an air cleaner unit 12, a high-mount strap lamp 25 and a trunk room lamp 26. The air cleaner 11 is mounted in a recessed part 41 of a rear package tray 28 of a vehicle, so that the strap lamp 25 is directed to a rear part of the vehicle in a state of the sub-units 12a, 12b joined.
